

Welcome to Freedom Solar!

Thank you for choosing to join the solar revolution! You have made a great decision for your finances, your future, and the environment.

So what happens next?

Step 1

Site Assessment & Design

(2–3 Weeks)

The next step in your solar installation is a site assessment. Our scheduler will coordinate a date and let you know if you are required to be home. Then it will take about two weeks after the site assessment for our team to prepare your design packet for the necessary approvals.

Step 2

Permits & Approvals

(4–6 Weeks)

Several approvals are required before we can begin construction. This may include the HOA architectural improvement request, utility interconnection application, and city permit request. You will receive email notifications when each is completed.

Step 3

Installation

(1–3 Days)

Our scheduler will contact you with an installation date and let you know what is required to begin construction. The installation time will depend on your project size, number of arrays, and roof pitch.

Step 4

Inspection

(1–2 Weeks)

We will schedule any required inspections, which typically include a final city inspection followed by a visit or other approval from your energy provider. The time to process and complete these inspections varies by jurisdiction and utility provider.

Step 5

Activation & Closeout

(1–3 Weeks)

We will provide you with specific instructions to energize your system, grant you access to your monitoring portal, and schedule a project closeout meeting with your Energy Consultant.

Help share solar in Colorado!

The easiest and most effective way to accelerate the positive impact you're having is to share your choice to go solar. **Here are 3 easy ways to spread more solar across Colorado:**

Give Solar Savings

Help your neighbors and coworkers discover the benefits of solar and earn rewards that improve your system payback.
